ART CONSORTIUM

A blockchain-based art securitization tool

ART CONSORTIUM – We provide our partners with the tools necessary to leverage the opportunities newly offered by blockchain technology and NFTs. Thanks to these tools they can unlock innovative funding sources to help with expanding their collections and contributing to their exhibition and educational programming.

BRAIN SECURITY

Sustainable cyber-awareness combining AI, gamification and neuroscience

BRAIN SECURITY – We make super efficient neuro-driven cybersecurity awareness trainings. We believe that the brain, often overlooked in cybersecurity strategies, holds the key to creating a safer internet. By centering our approach on the human brain, we aim to reduce the risk of human errors and prevent cyber attacks, making the internet a more secure place for all.

CARBON BLUE

Small-scale plastic recycling factories that can be used all over the world

CARBON BLUE wants to revolutionize the world of plastic waste by creating micro-factories based on ecological, innovative and connected equipment to transform the collected waste into finished products. All the objects thus created are in turn recyclable for life and traceable thanks to a unique QR code generated by the Eco-Traces application. We mainly offer this service to companies and communities to reduce their costs and improve their eco-responsible image.

COMIN

The first European ride-hailing platform leveraging blockchain technology for a more transparent and cost-effective service.

COMIN provides a ride-hailing platform leveraging blockchain technology, in partnership with existing providers. Users can effortlessly pay for rides using either fiat or cryptocurrencies thanks to our hybrid payment system, ensuring maximum flexibility and convenience. COMIN streamlines the ride-hailing experience. No need for multiple apps, no hidden fees - just a fast, fair, and user-focused service. With COMIN, we're simplifying the ride-hailing experience while upholding principles of fairness and transparency.

FAURE ENGINEERING

A new level of task automation for taxi drivers

FAURE ENGINEERING's range of services disrupts taxi drivers and passengers by enabling an unprecedented level of task automation. Its range of metrology products digitize the taxi ecosystem by providing a new level of task automation for drivers while safeguarding the interests of passengers and society. A new generation taximeter: cloud and big data for customer safety, global decarbonization, increased competitiveness (reduced costs, business management tools, impeccable fiscal transparency)

FLEXHORIZON

Energy / SaaS solution to value the flexibility of any smart-grid ready electrical device or system

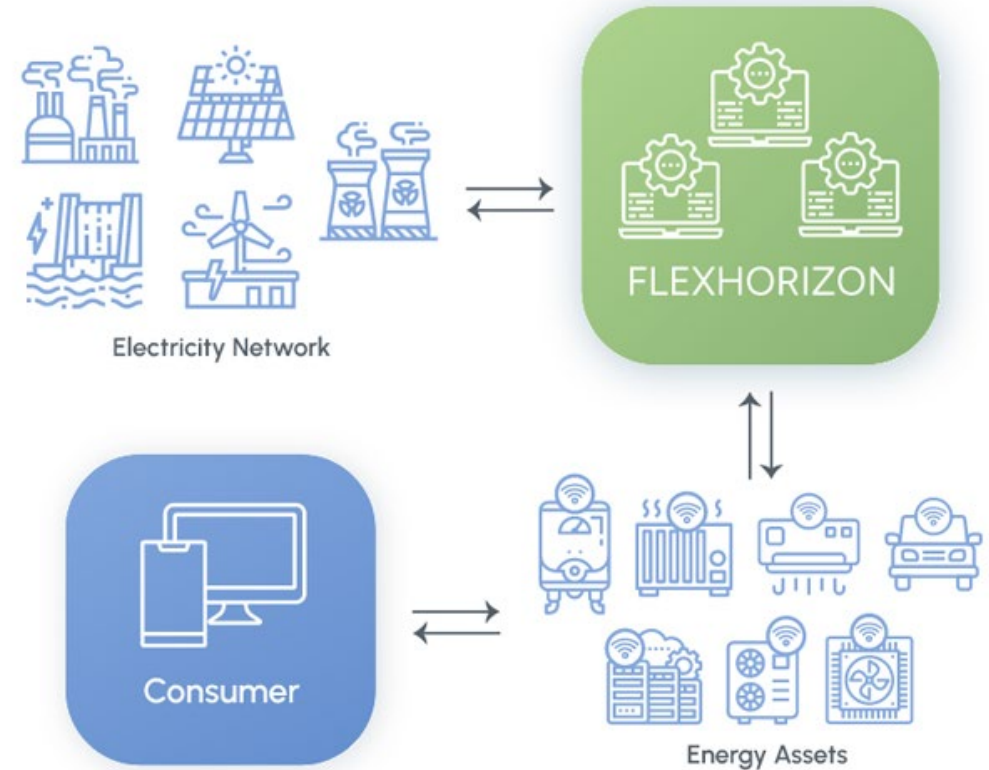

FLEXHORIZON – Our mission is to make possible a decarbonized, collaborative, highly adaptable and resilient energy system. We provide a software platform designed to automatically modulate the energy usage of distributed power consuming assets during times of high demand or stress on the electrical grid, preventing the need for power plants to burn fossil fuels like coal, gas or oil, while rigorously respecting functioning constraints at any time.

FLOWARE

Floware supports large cities in their major transportation projects

FLOWARE develops an innovative mobility flow analysis solution for private and public operators in the territories. The strength of our technology comes from the integration of our innovative sensors, modelling and simulation tools, driven by a strategic decision-making software. From the edge to the cloud, all our bricks are reinforced by AI, to ensure the scalability of our solution. The result: highly accurate, secure and anonymized data that can be used in a wide range of use cases, for an increasingly fluid, low-carbon and sustainable mobility.

GLANCEABLE

Unified customer feedback from all platforms across all industries

GLANCEABLE is a B2B SaaS platform specializing in transforming customer feedback into valuable insights. It handles various data types, including text, audio, and eventually video. Developed through years of extensive R&D, our proprietary AI models enable granular and in-depth analysis. Featuring an intuitive interface, the platform streamlines the process of identifying issues, defining, testing, and monitoring strategies and campaigns. Glanceable paves the way for enhanced efficiency and increased profitability by delivering actionable customer insights.

INSPEK

We reduce errors in chemical processes through better detection

INSPEK develops a chemical detection system based on optical microchips. This system allows better characterization of (bio)chemical reactions to accelerate process development and reduce production errors in many industries. The microchips make InSpek's sensors more efficient, smaller, and less expensive than current solutions, making them compatible with the single-use technologies commonly used in biotechnology.

RUNBLIND

Specialist in Augmented Audio applied to universal guidance

RUNBLIND - Thanks to its patented dynamic 3D sound technology for guidance, RunBlind replaces the vocal instructions of navigation applications by any music. The sound is spatially positioned in the direction to follow, and shows you the way to go. Our technology is suitable for Bluetooth headphones and headsets, but also for connected glasses, and is so effective that it is capable of making a blind person run around a track.
