ADVANCED CARE TECHNOLOGIES

Digi'Skin, a non-invasive device that restores sensory feedback for amputees using prostheses.

The number of amputees rose from 10M in 2014 to 65M in 2020, mainly due to cardiovascular and chronic diseases. Myoelectric prostheses, used by 43% of amputees, lack sensory feedback, causing a 50% abandonment rate after rehab. To address this, Advanced Care Technologies developed Digi'Skin, a non-invasive device that restores sensation, improves autonomy, and supports amputees' reintegration.

ARCHISMART SOLAR

Go Solar, Decarbonize, Create Value!

Archismart Solar is revolutionizing and accelerating the energy transition in real estate.

By combining AI with a unique “Solar as a Service” model, we help major property owners rapidly solarize their assets effortlessly and with zero upfront investment—significantly reducing their carbon footprint.

Thanks to our data-driven, automated approach, we turn rooftops into high-performance solar power plants, while delivering sustainable and value-enhancing solutions for our clients.

AUGMENTED SPORTS TECHNOLOGIES

AI-powered coaching tool for racket sports

Augmented Sports Technologies offers racket sports players and organizations an AI-powered coaching tool based on videos of their games, generating highlights, statistics and advice. Our technology can also streamline content production for social media by automatically generating statistics and highlights. We are starting with ping-pong via our web app [Ping Hero](https://pinghero.ai).

Bloc Noyau

BLOCTOBUILD

Designing for Resilience, Responsibility, and Industrialization

Real estate must reinvent itself to cut costs and reduce environmental impact. It all starts with design: the current crisis is an opportunity to rethink our methods.

BlocToBuild steps in early with a library of parametric blocks that incorporate regulations, industrial constraints, and sustainable materials.

No more endless prototypes—make way for streamlined, efficient design grounded in real-world needs.

BLUMANA

AI Agents Specialized in Your Customer Journeys

Blumana is deploying the first team of AI agents dedicated to the continuous improvement of your brand's customer experience.

In practical terms:

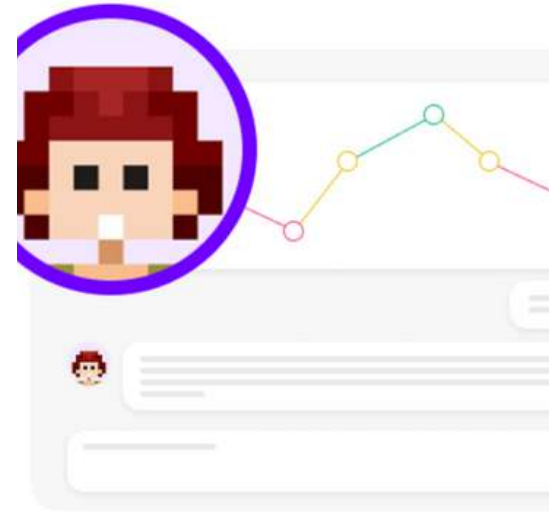

- Blumana instantly consolidates and interprets your customer feedback from all channels.
- Blumana launches its first two AI agents: Lina, the CX analyst, and Atlas, the messenger of the customer voice, bringing insights directly to your teams to enhance your brand experience.

COCODING AI

Build your SaaS without developers!

CoCoding.ai revolutionizes software development with our multi-agent AI platform that transforms natural language descriptions into functional applications. Our technology enables anyone, without technical skills, to create professional software in minutes instead of months, at a fraction of traditional cost. We democratize technology creation by removing technical barriers that block innovation, allowing everyone to bring their ideas to life

ELIPS

The Autonomous AI Agent That Follows Up with Your Leads

Elips is an autonomous AI agent connected to your CRM to track, qualify, and follow up on all your leads.

It updates your data, identifies the best opportunities to re-engage, writes personalized messages, and automatically follows up with forgotten prospects.

The result? More conversions, with no extra workload for your teams.

GALEIO

Pioneering AI for Complex and Untapped Data

Galeio builds custom foundation models and advanced analytics tailored to complex or unconventional data — including multispectral or radar imagery, multimodal sources, and beyond. We provide end-to-end services from custom AI model development to scalable deployment and production-ready analytics. Our mission is to make sophisticated AI analytics accessible, reliable, and cost-effective for industries — including defense — where standard solutions fall short.

INN'PULSE

A Pocket-Sized Defibrillator—Because Every Second Counts

Today, only 5% of sudden cardiac arrest victims survive. Why? Because a defibrillator must be used within the first 3 minutes, while the average emergency response time is 15 minutes.

Inn'Pulse has developed an autonomous, connected defibrillator that is 50–70% cheaper, smaller (pocket-sized), and simpler than any other. It's designed to fit on every floor of a building, as well as in first aid kits—for both professionals and individuals.

NALTILIA

Naltilia : Managing Compliance in the Age of AI

Managing regulatory compliance is burdensome, time-consuming and costs more than 200 Bn€ annually. Traditional compliance requires many manual and repetitive activities that beg for automation. Naltilia is an AI copilot for compliance professionals that accelerates compliance processes:

- Automated risk assessment
- Compliance program tailored to risks
- Tailor made policies and employee training
- Third party due diligence

Naltilia saves significant time and costs while boosting accuracy and trust.

RUBICON

Dual-use Artificial Intelligence Technologies Applied to Radar Satellite Data Analysis

Rubicon has developed dual-use technologies based on artificial intelligence for analyzing radar satellite imagery.

These solutions can identify areas likely to contain natural (geological) hydrogen—a new primary energy source with the potential to revolutionize our energy mix.

In the fields of security and defense, the same technologies make it possible to monitor areas spanning over 10,000 km² to detect suspicious or unusual activities.

SENSEBIOTEK HEALTHCARE

At SenseBioTek, we fight cancer diagnosis delays through body odor analysis.

SenseBioTek is a pioneering biotech startup specializing in early cancer detection using a revolutionary technology based on the analysis of volatile organic compounds (VOCs) emitted by the human body.

This non-invasive screening device is primarily designed for general practitioners, enabling them to quickly detect cancer, thereby accelerating access to specialized care, reducing healthcare costs, and ultimately saving patients' lives.

Solution to speed up diagnosis

Screening Medical Device
Non Invasive, Easy to use, Accessible

"Electronic Nose" that detects the smell of cancer before symptoms appear

TINENTAL

AI & IoT-powered pump optimization = -60% energy

Tinental has developed a groundbreaking optimization system that transforms industrial pump operations—with up to 60% energy savings.

- AI-Patented Control – Eliminates the need for a fixed set point.
- No Sensors Required – Our solution does not rely on external sensors, reducing complexity & costs.
- Seamless Retrofit – Works with old and new machines alike, requiring zero modifications to the production line.
- Plug & Play, No Downtime – with instant energy optimization.
